Juki Appoints Quantum Systems as its Representative for Arizona, New Mexico and Nogales Area

MORRISVILLE, NC — November 2009 — Juki Corporation announces that it has appointed Quantum Systems as its manufacturers' representative throughout Arizona, New Mexico and the Nogales area.

Quantum Systems is a manufacturers' representative firm located in Scottsdale, Arizona. The firm represents the top manufacturers for the Arizona, New Mexico and Sonora, Mexico territory, serving primarily the electronics, semi-conductor, light industrial and maquila markets.

Bob Black, Juki Automation Systems President & CEO commented "We are very pleased to have Bill and his Quantum Team joining us at Juki. The hard work and professionalism that are hallmarks of Quantum Systems will serve Juki Customers well in the years ahead."

Quantum Systems was created as a marketing, technical sales, and services firm in 2003. The foundation for the company is based on strong engineering and marketing backgrounds, coupled with years of working in the industry.

"Quantum is excited about the opportunity to partner with Juki Corporation. Juki is a dominant SMT player in the world, but their incredibly reliable equipment, exceptional values, and their industry-leading service have long been underestimated in the Americas - and here in the Southwest. We feel that we have strong growth potential with many companies who have been settling for just one of these core attributes when they can actually have all three," said Bill Butt, Managing Partner at Quantum Systems.

Quantum Systems will represent Juki Corporation's automated assembly products and systems throughout Arizona, New Mexico and the Nogales area. For more information on Quantum Systems' products and services, contact Bill Butt at (480) 219-4553 or on the Web at www.qtsm.net.

###

Juki Corporation's experience as the market leader in industrial sewing machines was the stepping-stone for the entry into the printed circuit board assembly market in 1987. Since then, Juki has delivered more than 22,000 automated assembly systems worldwide and is currently shipping an average of 200 assembly machines per month. This extraordinary achievement makes Juki one of the world's leading providers of automated assembly products and systems. In addition to its core technologies, Juki's Electronic Assembly and Test Systems Division develops and manufactures advanced electronic systems and computer software for data entry, mail processing and other electronic equipment.

With the purchase of Zevatech's assets in November 1999, Juki Automation Systems now brings Juki's reputation for top quality and reliable service also to the North and South American and the European electronics assembly markets. Juki recognizes the challenges of the new century and is prepared to respond to the globalization of electronic manufacturing. With a sophisticated knowledge base, advanced technologies and a high commitment to its customers, Juki is poised for continued growth in the 21st century.
