TR-ISNR TR-5DNR TR-5SNR TR-6DNR TR-6SNR

Mounter MTC

Our family of Matrix Tray Modules will enlarge the productivity and flexibility of your assembly line.

You are always a winner with JUKI Matrix Tray Modules! Our modular product line can be matched to your exact requirements. This provides the optimum combination of productivity, flexibility and reliability with the

Lowest Cost of Ownership.

Component feeding by shuttle (TR-6)

The module is equipped with a shuttle that brings the components to the head for picking. The big advantage of this system is that no feeder space is lost.

Components with a minimum flat surface of 5mm \times 5mm can be picked with a vacuum nozzle (TSOP, QFP, PLCC). Other rectangular components such as BGA, FBGA and connectors with a minimum outline of 17mm \times 17mm will be handled mechanically.

Component feeding by matrix tray (Tray holder, TR-I & TR-5)

The matrix tray server is installed on the rear bank of the assembly machine and presents trays to the machine one at a time so that the placement head can pick components directly from the trays.

All components, especially odd form, can be presented using this type tray changer/holder.

Non-Stop-Operation

This option allows the operator to replace empty trays while the machine continues to run without impacting production.

Standard Features and Option

Empty Tray Indicator (Option for KE-2070/2080)

0

An indicator light shows which tray is empty

Waffle Pack Holder (Option)

2

A specially designed tray holds 2 x 2" waffle packs

Super Low Speed Mode (Option for KE-2070/2080)

New lower tray handling speed prevents very light components from jumping out of the tray.

Tray Base Orientation Check

A sensor checks tray hole or edge and verify its position before the magazine goes into operation

Matrix Tray Holder

Feeding method:

Fixed trays $322 \times 270 \times 28 \text{ mm}$

Applicable tray size: 322 × 1 (Full ty

(Full type) $160 \times 270 \times 28 \text{ mm}$

(Half type)

Component size:

min. $65 \times 65 \times 5$ mm all components the

assembler can handle

Occupied positions:

20 8 mm feeders

(Full type)
10 8 mm feeders
(Half type)

Dual Tray Server (TR-ISNR)

Feeding method: Number of trays:

Automatic tray exchange

ys: max. 2

Tray size:

max. $340 \times 230 \times 28 \text{ mm}$

min. $150 \times 90 \times 5$ mm

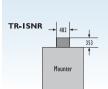

Weight / Tray: max. 500g

Component size:

all components the assembler can handle

Occupied positions:

assembler can handl 24 8 mm feeders

Matrix Tray Changer (TR-6SNR / TR-6DNR)

Feeding method: Dual shuttle

Number of trays: max. 20 (TR-6SNR) max. 30 (TR-6DNR)

max. 15 (TR-6DNR) in non-stop mode

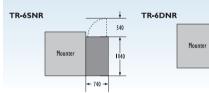

Tray size: max. $340 \times 230 \times 15$ mm

min. $150 \times 90 \times 5$ mm

Weight / Tray: max. 500g
Component size: max. 50 x 50 mm

min. 5×5 mm

Occupied positions: 0

Matrix Tray Server (TR-5SNR / TR-5DNR)

Feeding method: Number of trays: Presented tray max. 40 (TR-5SNR) max. 40 (TR-5DNR) max. 20 (TR-5DNR) in non-stop mode max. 340 x 230 x 28 mm

← 840 →

Tray size:

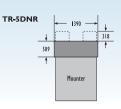

max. $340 \times 230 \times 28 \text{ mn}$ min. $150 \times 90 \times 5 \text{ mm}$

Weight / Tray: Component size: max. 500g all components the

Occupied positions:

assembler can handle complete rear bank

A leading supplier worldwide

Juki has now installed more than 17,000 placement systems worldwide, establishing us as one of the top SMT suppliers to the global market. All Juki products are designed to guarantee our customers the absolute lowest production cost (Lowest Cost of Ownership). With outstanding flexibility and high placement rates the new models will again define the new standard for midrange applications, perfectly suited for the European market

What we mean by Lowest Cost of Ownership

Often when deciding on the purchase of a new placement system, only the initial investment cost and the theoretical placement rate are considered. This overlooks many other factors that make up the overall production cost. Consumables, spare parts and service can be a big cost factor. Such things as changeover times, machine breakdowns and the difference between the theoretical and actual throughput rate significantly affect productivity. Maintenance, programming and operator training account for additional personnel costs. Thanks to their many years of experience building flexible modular placement systems Juki has gained an outstanding reputation. Data from the market has shown that compared to systems from other manufacturers, Juki clearly provides the highest reliability and lowest cost of ownership in the industry.
